

FINAL SKETCHES

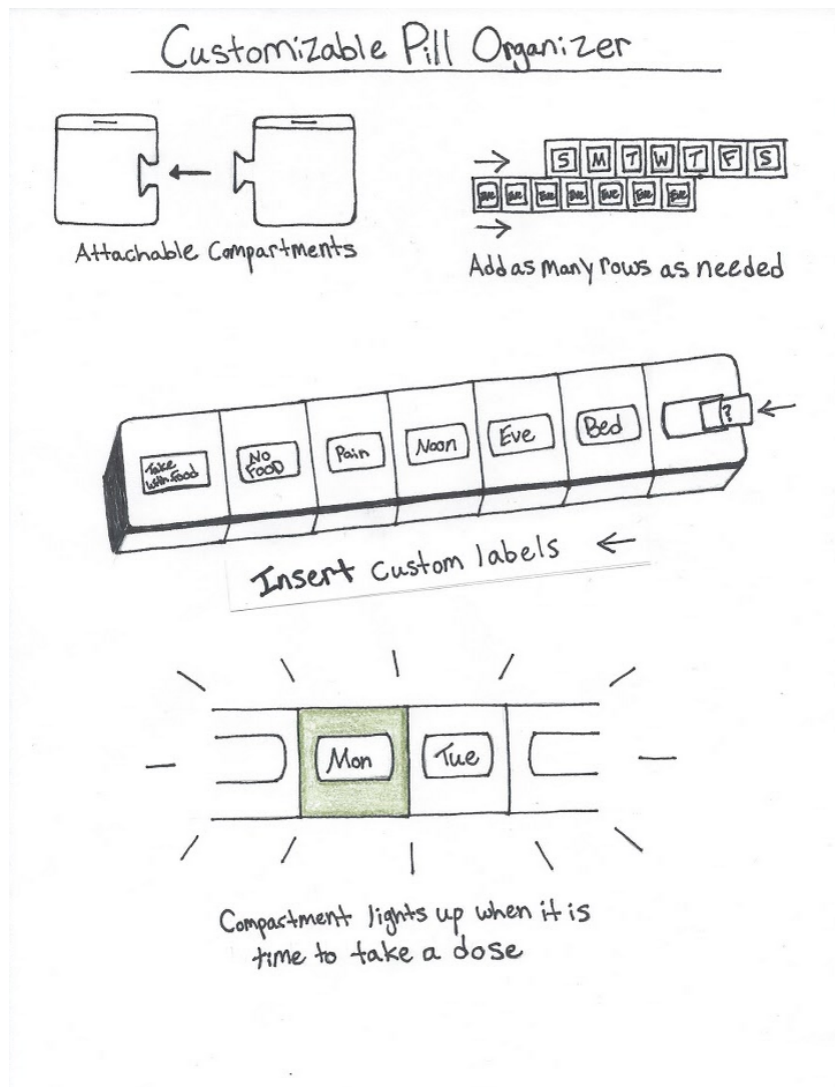

Sketches of our design based off of our user research

Record Keeping System

This is a notebook with a template for filling out important information regarding medications, appointments, and questions for doctors. This will allow users to stay organized as well as easily share information with medical professionals.

Medication Organization System

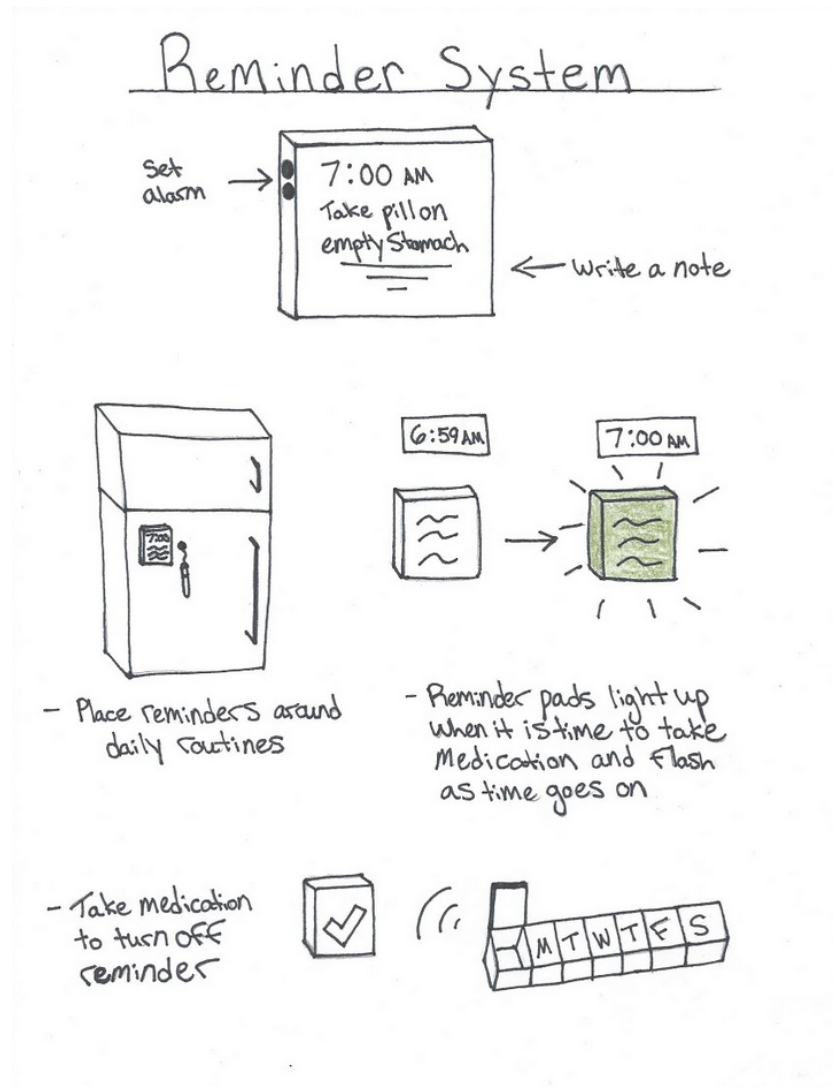

The pill organizer is essentially the pill medication set that is commonly used for managing medications. Our features that we've added include:

- **Attachable compartments.** This will allow users to add more compartment rows in the case that you needed to take medication multiple times a day.

- **Custom label inserts.** This will allow users to add any personal text or labels to each compartment rather than the default "Sun-Sat"

- **Ambient light notification.** This will allow users to see exactly which compartment contains the medication to be taken. This will be synced up to the reminder system by setting an alarm.

Reminder System

This is a portable system that allows users to place reminders around rituals and routines. Visual reminders are conveyed through text and ambient lighting cues. It is synced to the pill box which allows for many useful features including:

- **Portability.** This can be placed in any known area to provide cues for taking medications. It will adapt to daily routines.

- **Ambient light notifications.** This will provide users with a calming, nonintrusive visual reminder for medications using lights.

- **Ability to set alarms.** This feature will allow users to set alarms

for when to take medications. Alarms can be reset at any time.

- **Ability to write custom notes.** This will allow users to view instructions for taking medications or times for taking medications according to their personal preferences.

Questions

1. How do you feel about all the features of the Pill Organizer system?
 - a. What features do you find the most important?
 - b. What features do you deem unnecessary?
 - c. What features would you like to have if any?
2. What would be the best way to make the pill set compartments attachable?
 - a. Snaps?
 - b. Slides?
 - c. Velcro?
 - d. Magnets?
3. How do you feel about all the features of the Reminder system?
 - a. What features do you find the most important?
 - b. What features do you deem unnecessary?
 - c. What features would you like to have if any?
4. How would you want to be reminded for taking medication?
 - a. Light
 - b. Sound
 - c. Music
 - d. Familiar Voice
 - e. Phone call
5. How do you feel about all the features of the Record keeping system?
 - a. What features do you find the most important?
 - b. What features do you deem unnecessary?
 - c. What features would you like to have if any?
